

CIP – Online – Basic Principles

Duration: Half Day

Target Audience

This course is for anyone who uses or needs to understand the basics of CIP – such as Process Operators, Engineers and Lab / Quality Department personnel.

Course Description

The course is designed to help your employees understand the workings of a CIP Set.

The tutor will explain the importance of cleaning, CIP design, equipment and operation, together with requirements in relation to BRC.

Common CIP chemicals, sampling and routine checks will also be covered.

All in all delegates will have a basic understanding of what is required in order to achieve good, repeatable cleaning results.

Learning Outcomes

On completion of the training the learner will understand:

- The different types of CIP Set and their various control systems
- Basic CIP design, standard equipment and operation to ensure smooth, repeatable running and compliance with the BRC quality standard
- What to do in case of aborted cleans
- The typical cleaning and disinfection agents used on CIP Sets and their safe use

The course contains breaks and activities to keep delegates refreshed and engaged throughout.
